Executive Summary: A High-Performing, Regionally Concentrated Workforce

01

Operational Centralization

The workforce is heavily centralized, with 96.6% of employees located in Switzerland and Europe, presenting high operational control but limited global footprint.

02

Youthful Energy

The organization is defined by "prime working years" talent, with the vast majority of staff falling into the 20–29 and 30–39 age brackets.

03

The Recruitment vs. Advancement Gap

While recent hiring skews Male (59%), internal mobility strongly favors Females, who are promoted faster across most job levels, particularly at the Executive tier.

04

Meritocratic Culture

Performance ratings reveal near-perfect gender parity (2.42 Female vs. 2.41 Male), validating fair evaluation processes despite hiring imbalances.

Audit Objectives & Methodology

Objectives

- **Assess Diversity:** Evaluate current gender and age balances to identify gaps in the talent pipeline.
- **Analyze Performance Equity:** Determine if performance ratings and promotion velocities are equitable.
- **Identify Risks:** Highlight potential vulnerabilities in regional distribution and succession planning.

Methodology

Data Source: Pharma Group AG Employee Demographics and Performance Dashboard

Scope: Active workforce metrics including Age, Gender, Tenure, Promotion Velocity, Role Distribution, and Region.

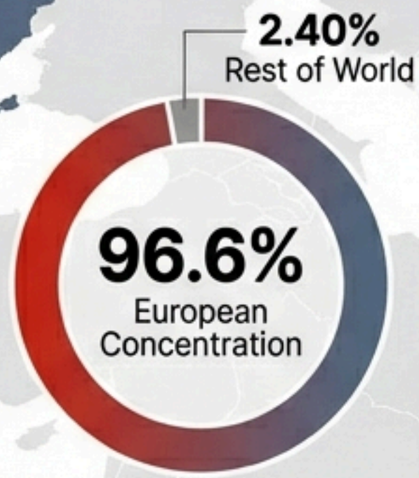

Focus: Cross-referencing performance metrics against demographic variables to isolate trends.

Pharma Group AG is Heavily Anchored in the DACH/European Region

52.00%
(Switzerland)

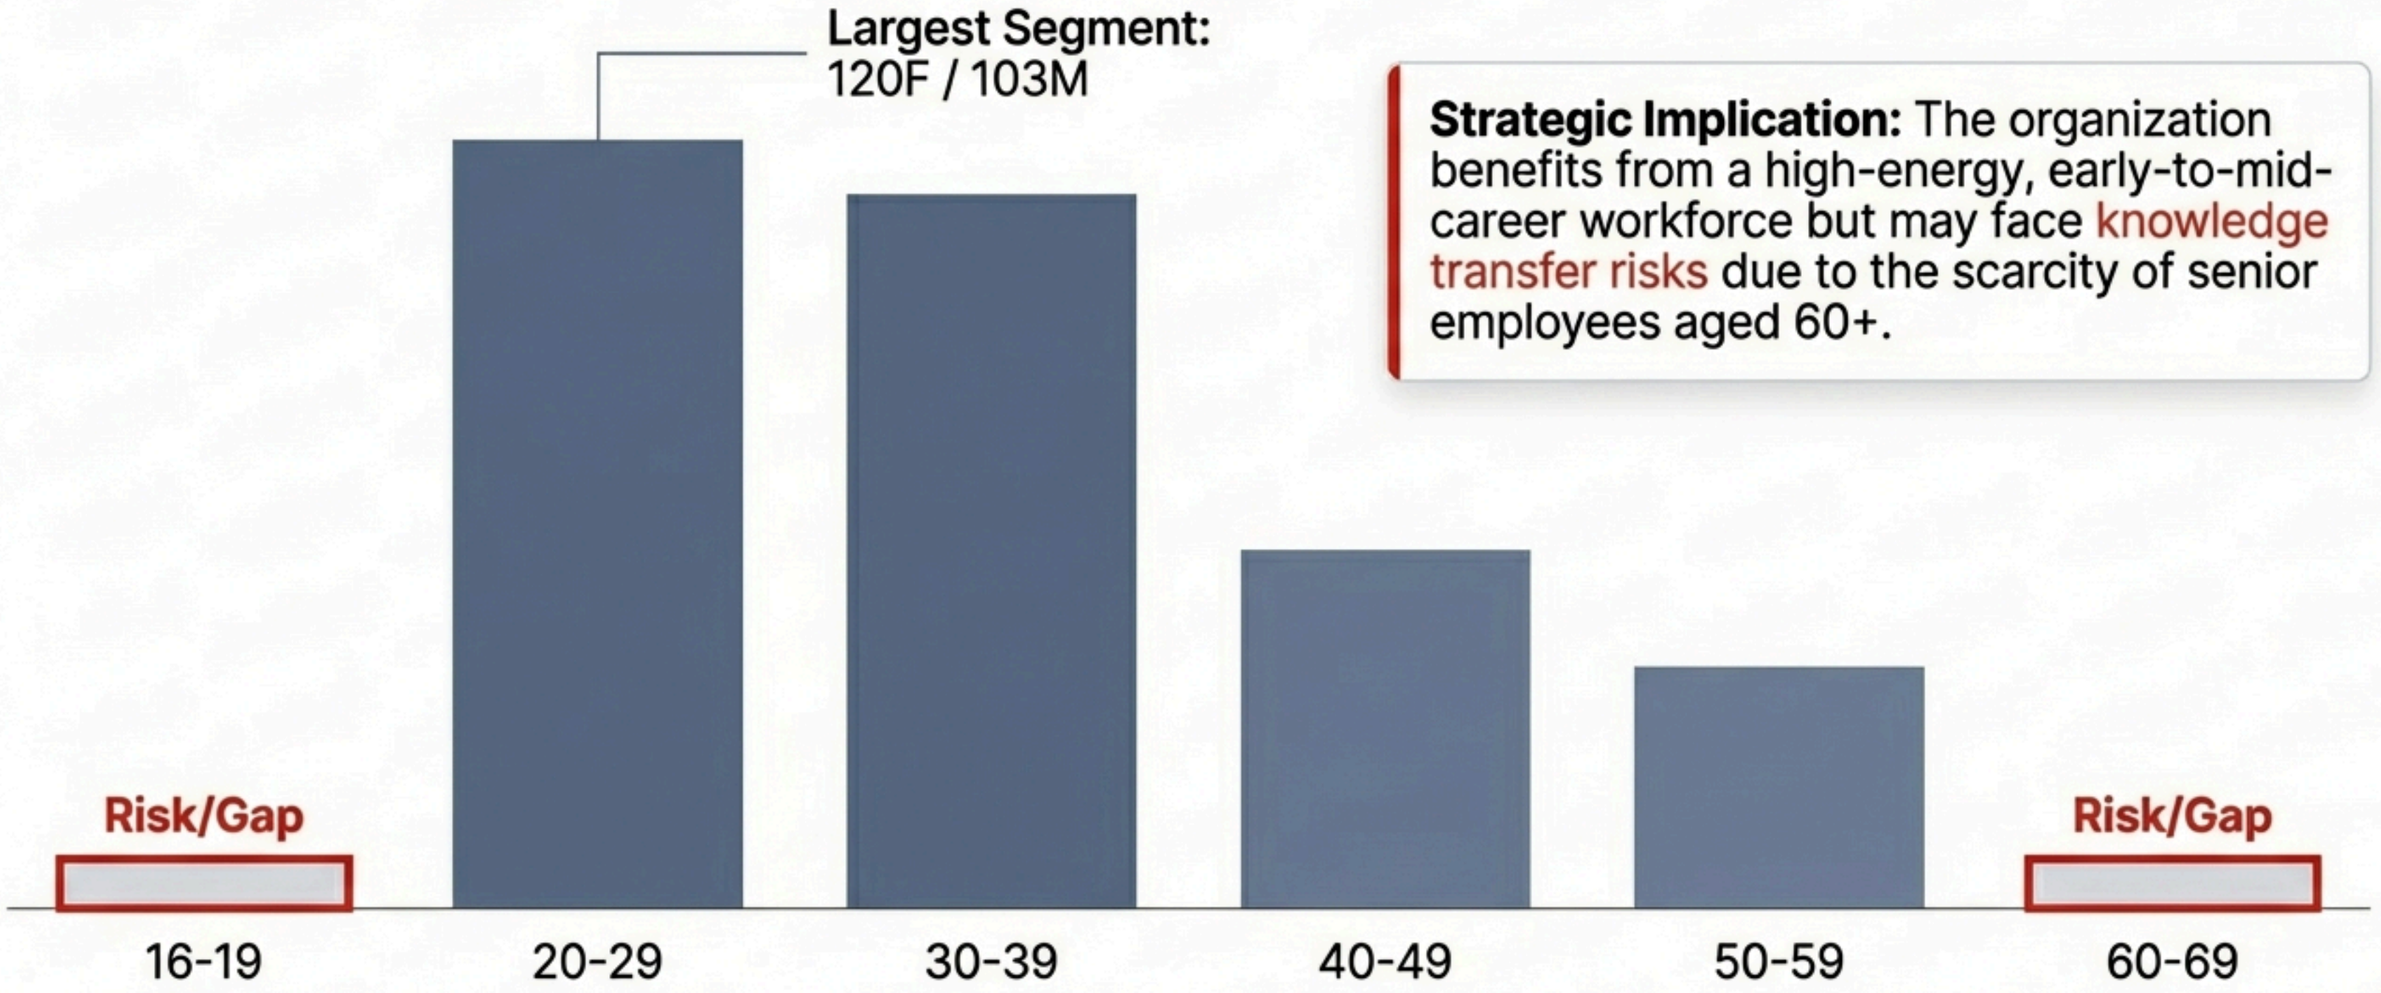

44.60%
(Europe excl. CH)

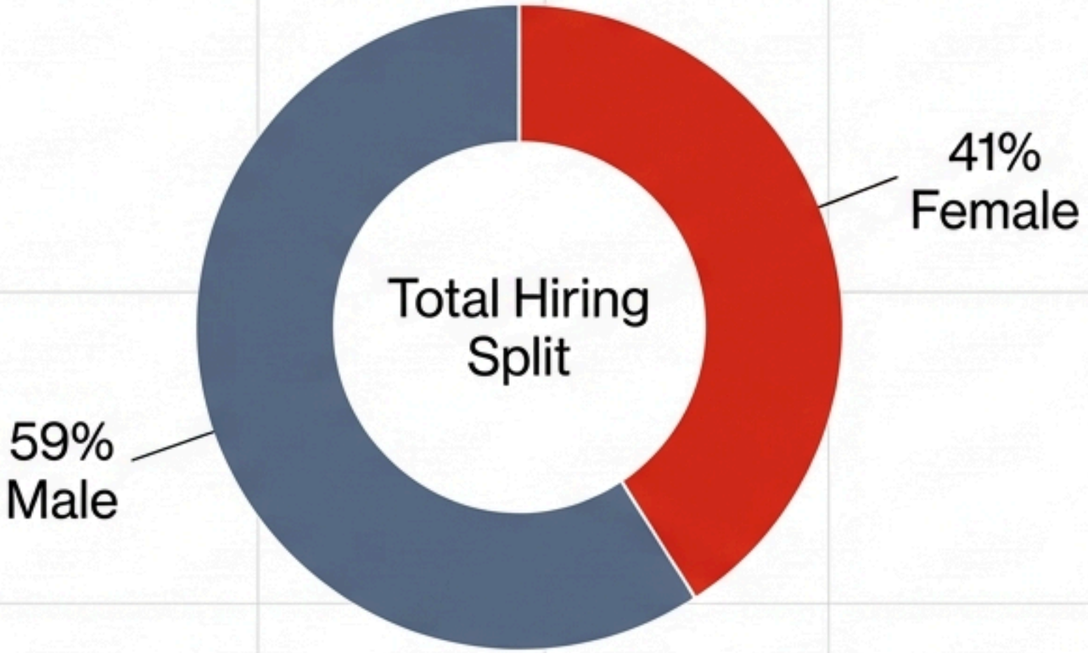

Key Insight: 96.6% of the workforce is concentrated within the European continent. While this centralizes operations, the minimal representation in other regions suggests a lack of local market expertise in global growth territories.

Workforce is Concentrated in Prime Working Years, with Gaps at the Extremes

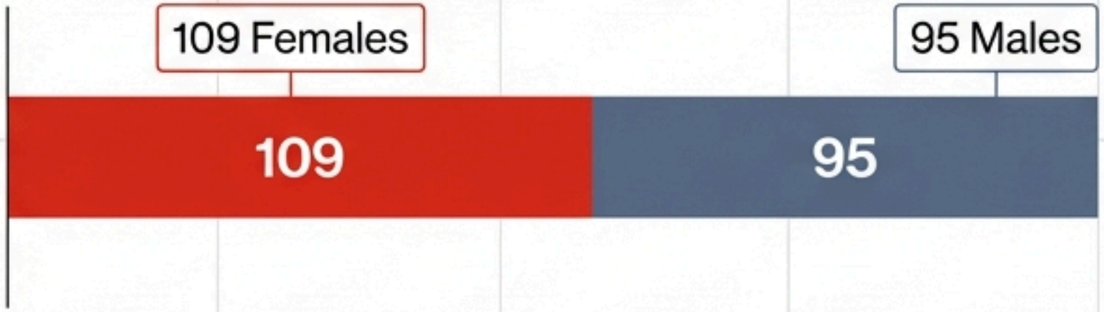

Strategic Implication: The organization benefits from a high-energy, early-to-mid-career workforce but may face knowledge transfer risks due to the scarcity of senior employees aged 60+.

Recent Hiring Trends Favor Males, Creating a Funnel Imbalance

Junior Officer Intake (Highest Volume Role)

Junior Officer role leans slightly female, implying other roles are heavily skewed male to cause the aggregate 59% male average.

Analytical Insight: **Despite a balanced current workforce, recent hiring trends threaten to skew the gender ratio toward males if not corrected.**

Performance Evaluations Demonstrate High Gender Parity

Key Takeaway: The difference is negligible (0.01). This suggests that once talent enters Pharma Group AG, the evaluation framework is highly objective and meritocratic. There is no evidence of systemic performance bias based on gender.

Internal Mobility Data Shows Faster Promotion Velocity for Women

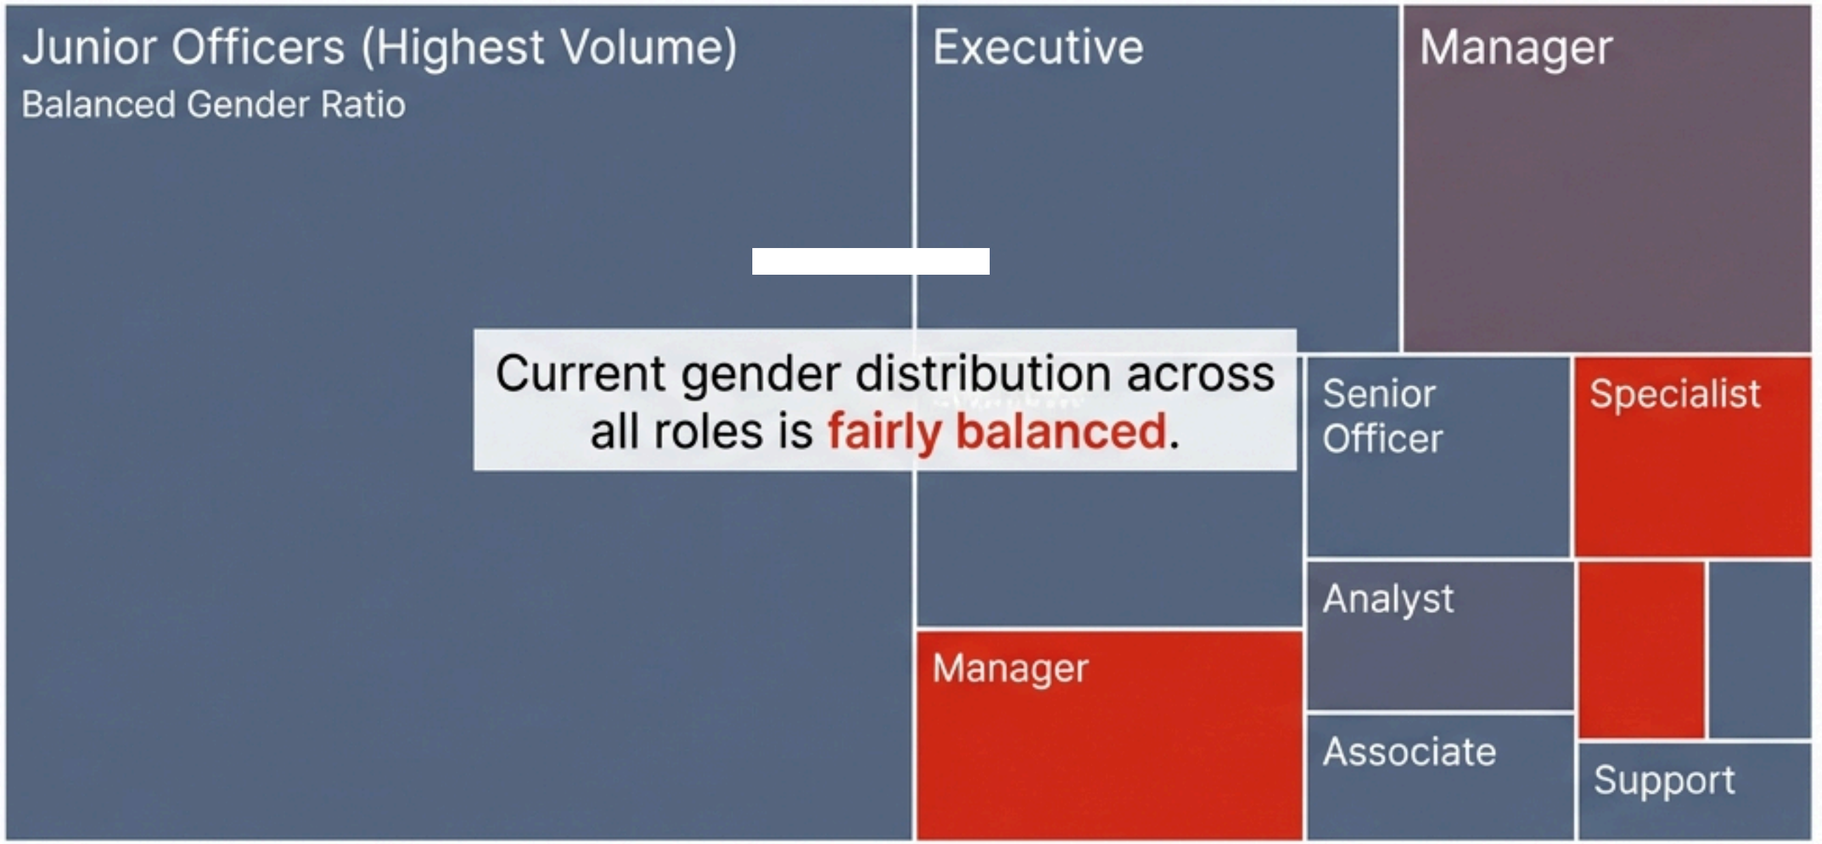

Average Time to Promotion (Executive Level)

The Accelerator Effect

The organization is an ‘accelerator’ for female talent. Women at the Executive level are advancing significantly faster than their male counterparts. Combined with the performance parity data, this suggests high efficacy in identifying and elevating top female performers.

Job Role Distribution Remains Relatively Balanced Despite Hiring Skews

Synthesis:
The current stability in role distribution acts as a buffer against the 59% male hiring trend, but this balance will erode if recruitment trends persist.

Female Hiring Deficit

Strategic Recommendations

1. **Diversify Geographical Footprint**
   Initiate a feasibility study for expanding hubs outside of Europe to address the **2.4%** "Rest of World" imbalance and de-risk the **96.6%** European concentration.
2. **Audit Recruitment Funnel**
   Investigate the **59%** Male hiring skew. While Junior Officer intake is healthy, identify which specific roles are driving the male surplus and implement targeted sourcing.
3. **Leverage Female Success Stories**
   Capitalize on the strong female promotion velocity (**1.86 years** at Executive level) to brand Pharma Group AG as a premier destination for ambitious women.
4. **Bridge the Age Gaps**
   Develop internship programs for the 16-19 demographic and retention/advisory tracks for the 60–69 demographic to smooth the age curve.

Conclusion: Converting Internal Equity into Global Growth

Pharma Group AG possesses a robust, **high**-performing internal culture where gender **does not dictate success**—in fact, female talent accelerates rapidly. The primary challenge is not internal culture, but external positioning.

By widening the geographical net and correcting the male-skewed recruitment funnel, Pharma Group AG can leverage its 'p-rime working age' workforce to drive significant future expansion.

Inside Pharma Group AG: A Snapshot of Our Workforce

WORKFORCE DEMOGRAPHICS

Youth-Dominated Workforce

The majority of employees fall into the 20-29 and 30-39 age groups, while the 16-19 and 60-69 brackets are significantly underrepresented.

PERFORMANCE & CAREER PROGRESSION

Females Promoted Faster

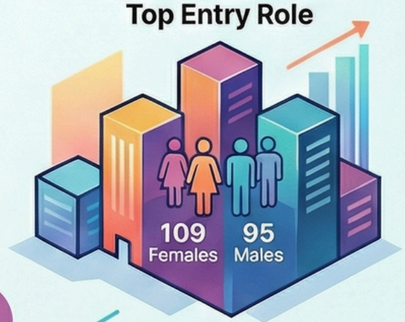

Across most job levels, female employees tend to have a shorter average time to promotion compared to their male colleagues.

Executive Level
Promotion Gap:
1.86 vs
3.00 Years

JOB ROLES

Junior Officer is the Top Entry Role

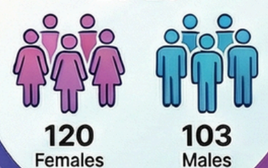

Balanced Gender Ratio Across Roles

Overall gender distribution is fairly balanced across the company's various job roles, with only minor variations.

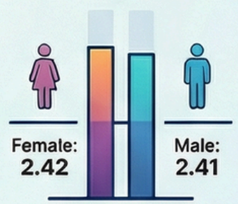

Peak Age Group: 20-29

59% Male / 41% Female

This is the gender distribution observed among the company's recent hires.

Nearly Identical Performance Ratings

The average performance ratings are almost the same.

Regional Distribution

2.4% in Other Regions

All other global regions combined account for a minimal portion of the company's total employee base.
